100 000 PSM Coordination D. Pollacco
101 000 PSM Project Office D. J. A. Brown
103 000 PSM Coordination Team D. Pollacco
PSM Working Groups
Light curve Stitching Working Group S. Aigrain
Stellar Variability Working Group S. Aigrain, S. Sulis, & A. Santerne
Young Stars and Planets Working Group E. Gillen
Planetary Phase Curves Working Group M. Lendl
110 000 Exoplanet Science D. Pollacco
111 000 Coordination of Tools for Lightcurve Filtering L. Malavolta
111 100 Tools for Lightcurve Filtering S. Aigrain
111 200 Tools for Detecting & Filtering Residual Instrumental Noise D. Pollacco
112 000 Specification of Planet Detection Tools J. Cabrera
112 100 Transit Detection Tools J. Cabrera
112 200 Detection of Single and Unusual Transit Events P. A. Gizon
112 210 Irregular transits due to asteroid/planet remnants in front of WDs R. Silvotti
112 300 Detection and Characterisation of Exoplanet Phase Curves J.-M. Desert
112 400 Other Detection Methods R. Silvotti
112 420 Eclipse Timing Variation in Eclipsing Binaries S. Dreizler / S. Schuh
112 430 Phase Variations in Pulsating Stars R. Silvotti
112 500 Multi-planet Systems S. Desidera
112 510 Photometric Detection of Circumbinary Planets H. Deeg
112 520 Planets in Trojan Orbits F. Marzari
112 530 Exomoons and Binary Planets G. Szabo
112 540 Other Multiple Systems S. Desidera
112 600 Transit Timing Variations / Transit Duration Variations V. Nascimbeni
112 610 TTV / TDV Detection V. Nascimbeni
112 620 TTV / TDV Modelling R. Marding
112 700 Detection & characterisation of dynamically active planetary systems A. Leleu
113 000 Planet Candidate Ranking Procedures M. Deleuil
113 100 Rank Planet Candidates A. Collier Cameron
113 200 False Positive Identification Through Centroid Analysis A. Santerne
113 300 Astrophysical False Positives A. Collier Cameron
114 000 Fitting Tools Sz. Csizmadia
114 100 Transit Curve Modelling Tools Sz. Csizmadia
114 200 Accurate Orbital Parameter Determination A. Santerne
114 300 Rossiter-McLaughlin Modelling Tools G. Hébrard
115 000 PLATO Data Specific Science D. Pollacco
115 100 Astrophysical Noise Source C. Watson
115 200 Planetary System Characterisation A. Sozzetti
115 300 Planet-Star Interactions S. Mathis
115 400 Transits of Close-In Objects C. Haswell
115 500 Non-Transiting Planets via REBs D. Barrado
115 600 Composition and Interior Evolution of Terrestrial Planets S. Werner
115 700 Planet Occurrence Rates V. Van Eylen
116 000 PLATO Interpretation Specific Science H. Rauer
116 100 Composition & Formation of Gas & Ice Giants T. Guillot
116 200 Mass-radius Terrestrial Planets N. Nettelmann
116 300 Planetary Formation and Orbital Evolution R. Nelson
116 310 Protoplanetary Disc Models O. Gressel
116 320 Disc-planet Interactions W. Kley
116 330 The Assembly of Planetary Systems Y. Alibert & A. Johansen
116 340 The Post-Formation Long-term Dynamical Evolution of Planetary Systems A. Morbidelli
116 350 Planet Formation and Evolution in Binary Systems R. Nelson
116 360 The Influence of Birth Environment on the Formation and Evolution of Planetary Systems M. Davies
116 370 Post Main Sequence Evolution of Planetary Systems M. Wyatt
116 380 Statistical Comparison Between Theory and PLATO Data C. Mordasini
116 400 Atmospheres of PLATO Terrestrial Planets J. L. Grenfell
116 500 PLATO Habitable Zone Planets M. Güdel / H. Lammer
116 510 Environments of PLATO HZ Planets H. Lammer
116 520 Astrophysical Factors Influencing Habitability of PLATO Planets M. Güdel
116 530 Climate / Atmospheres of PLATO Habitable Zone Planets J. L. Grenfell
116 600 Dynamical Interactions in Multi-Planet Systems J. Laskar
116 610 Long-Term Dynamical Evolution of Planetary Systems J. Laskar
116 620 Stability and Resonances in Multi-Planet Systems J. Laskar
116 630 Tidal Dissipation and Evolution of Multi-Planet Systems A. Correia
116 640 Rotational Evolution of Planets in Multiple Systems G. Boué
116 650 Planetary Ephemerides of PLATO Systems A. Fienga
116 700 Cloud and Gas Chemistry of Planetary Atmospheres C. Helling
116 800 3D Exoplanet Climate modelling L. Carone
117 000 Interfaces to Other PSM WPs & PDC N. Santos
117 100 Planet Host Characterisation Requirements V. Adibekyan
117 200 Understanding planets through their host stars V. Van Eylen
120 000 Stellar Science M.-J. Goupil
121 000 Stellar Models A. Serenelli
121 100 1D Stellar Models Y. Lebreton
121 110 Grids of Stellar Models J. Montalban
121 120 Theoretical Oscillation Frequencies J. C. Suárez
121 200 Transport Processes A. Palacios
121 300 M dwarfs S. Cassisi
121 400 PMS evolution J.P. Marques
121 500 2D / 3D Stellar Evolution M. Rieutord
121 600 Evolution of Stars in Multiple Systems S. Mathis
122 000 Non-Seismic Diagnostics and Model Atmospheres T. Morel
122 100 1D Model Atmospheres B. Plez
122 200 3D Model Atmospheres H. G. Ludwig
122 300 Fundamental Stellar Parameters M. Bergemann
122 400 Limb Darkening G. Morello
123 500 Input Data for Fundamental Parameters Determination D. Nardiello
123 000 Stellar Activity and Rotation A. F. Lanza
123 100 Spot Models N. Meunier
123 200 Surface Convection (1D & 3D) F. Kupka
123 300 Models of Rotation: Evolution and Gyrochronology M. Pinsonneault
123 400 Dynamos and Differential Rotation A. S. Brun
123 500 Tools to Measure Rotational Modulation S. Messina
123 600 Stellar Rotation From Transits A. Silva-Valio
123 700 Stellar Flares B. Stelzer
124 000 Seismic Diagnostics M. Cunha
124 100 Forward Approaches I. Roxburgh
124 200 Inverse Techniques D. Reese
124 300 Acoustic Glitches S. Deheuvels
125 000 Determination of Stellar Parameters A. Miglio
125 100 Scaling Relations E. Corsaro
125 200 Inference on Stellar Properties From Existing Data A. Miglio
125 300 Seismic Parameters C. Karoff
125 400 Open Clusters & Binary Stars S. Basu
125 500 Benchmark Stars O. Creevey
126 000 Mode Physics J. Ballot
126 100 Mode Amplitude & Near-Surface Effects on Mode Parameters J. Philidet
126 200 Mode Line Width M.-A. Dupret
126 300 Intensity-Velocity Relation G. Houdek
126 400 Seismology of Magnetic Activity L. Gizon
126 600 Mode Visibilities M. Lund
127 000 Seismic Constraints From Aging Stars B. Mosser
127 100 Stellar Models of Evolved Stars P. Ventura
127 200 Seismic Diagnostics for Evolved Stars A. Miglio
127 300 Constraints on Main-Sequence Stars J. Montalban
128 000 Power Spectrum Fitting Tools W. J. Chaplin
128 100 Average Seismic Parameters R. Garcia
128 200 Mode Fitting Tools W. J. Chaplin
128 210 Solar-Like Stars M. Bo Nielsen
128 220 Solar-Like Stars with Planets M. Bo Nielsen
128 230 Multiple Stars G. Davies
128 240 Ensemble Fit J. Ballot
128 250 Fitting Tools for Evolved Stars S. Hekker
128 300 Light Curve Preparation for Asteroseismology A. Moya
129 000 Interfaces to PDC & PSM WPs, and public outreach R-M. Ouazzani
129 100 Interface to PDC & PSM WPs R. M Ouazzani
129 200 Public outreach F. Baudin
WP12 Working Teams
120 100 WP120 Management Office K. Belkacem
120 200 WP120 Performance M. Deal
WT1 scv Catalogue K. Zwintz
WT2 Error Estimate & Propagation through SAS M. Bazot
WT3 Subgiants S. Deheuvels
WT4 M-dwarfs Through Stellar Pipelines B. D. Rojas Ayala
WT5 Impact of LL Light Curve Characteristics on SAS Outputs J. Ballot
130 000 Target / Field Characterization and Selection G. Piotto
130 100 Project Office Assistant V. Granata
131 000 Catalogues Analysis V. Nascimbeni
131 100 GAIA Catalogue Analysis V. Nascimbeni
131 110 Planets from Astrometry & Photometry with Gaia A. Sozzetti
131 120 Photometric Analysis S. Hodgkin
131 130 Spectroscopic Analysis A. Recio-Blanco
131 140 GAIA Parameters Extraction M. Montalto
131 150 PLATO-GAIA Simulations J. Carrasco
131 200 Other Large Catalogue Analysis M. Montalto
131 210 Photometric and Astrometric Catalogues V. Nascimbeni
131 220 M-Dwarfs I. Prisinzano
131 221 M-Dwarfs as Planet Hosts P. Wheatley
131 230 Stellar Activity I. Pagano
131 240 Binary Systems S. Desidera
131 250 Large Spectroscopic Catalogue L. Malavolta
131 260 Known and Candidate Planet Analysis S. Benatti
131 300 Single Target Additional Data I. Boisse
131 310 High Resolution and Deep Imaging A. Vigan
131 320 Spectroscopic Data L. Malavolta
131 330 Preparatory Observations K. Strassmeier
131 400 Space Mission Data M. Deleuil
131 600 Contaminant Analysis U. Kolb
131 610 Contaminant Modelling Tool U. Kolb
131 620 Gaia Analysis of Contaminants N. Walton
131 630 Contaminant Analysis From Other Catalogues V. Nascimbeni
132 000 Field and Target Selection M. Montalto
132 100 Field Selection S. Ortolani
132 200 Target Selection and Prioritisation M. Montalto
132 210 Target Selection M. Montalto
132 220 Target Ranking A. Sozzetti
132 300 PLATO Field Contaminants U. Kolb
132 310 Single Target Contaminants U. Kolb
132 320 False Alarm Probability A. Santerne
132 400 Scientific Validation V. Adibekyan
133 000 Interfaces R. Claudi
133 200 Interfaces to PSM & PDC V. Granata
133 300 Interface GAIA-PLATO N. Walton
133 400 Interface to Performance Team M. Montalto
140 000 Ground-based Observation Programme S. Udry
140 100 GOP Office N. Mowlavi
140 200 Interfaces to Other PSM WPs and PDC N. Santos
140 300 Quality Control T. G. Wilson
140 400 Resource, Yield, and Monitoring Y. Alibert
141 000 Strategy and Operation D. Pollacco
141 100 GOP Communications & Data Handling E. Masana
141 110 Repository & Internal Communication Tools E. Masana
141 120 Observer Interface N. Billot
141 130 GOP-PFU Communication J. Portell
141 200 Optimisation & Scheduling I. Ribas
141 210 Scheduler JC. Morales
141 220 Observation Type Determination A. Santerne
142 000 Radial Velocity Follow-Up F. Bouchy
142 100 Radial Velocity Computation Tools X. Dumusque
142 200 Reconnaissance Spectroscopy and RV C. Moutou / E. W. Guenther
142 300 High-Precision RV Measurements F. Pepe
142 400 Infrared Radial Velocity Measurements T. Forveille
142 500 Radial Velocity Reprocessing & Homogenisation L. Malavolta
143 000 Time Critical Photometry R. Alonso
143 100 Photometry Specific Tools H. Deeg
143 200 Citizen Contribution to Photometric Follow-Up G. Wuchterl
143 300 Standard & Multicolour Photometric Observations E. Pallé
143 400 Secondary Eclipses R. Alonso
143 500 Photometry Reprocessing & Homogenisation P. Chote
144 000 Higher Angular Resolution Imaging S. Desidera
144 100 Imaging Analysis Tools A. Vigan
144 200 Reconnaissance High Resolution Imaging M. Janson
144 300 High Contrast Imaging D. Mesa
144 400 Additional Observations & Candidate Classification C. Lazzoni
144 500 Imaging Reprocessing & Homogenisation P. Delorme
145 000 Observations for Stellar Characterisation A. Reiners
145 100 Spectroscopic Tools S. Sousa
145 200 Spectro-Polarimetry P. Petit
145 300 Interferometry D. Mourard
145 400 High Resolution Spectroscopy M. Bergemann
145 500 Spectroscopic Reprocessing & Homogenisation S. Sousa
146 000 Additional Exoplanet Follow-Up X. Bonfils
146 100 Transmission Spectroscopy Follow-up D. Ehrenreich
146 200 Secondary Eclipse and Phase Variation Spectroscopy R. Alonso
146 300 Developing Techniques for Atmosphere Characterisation X. Bonfils
146 400 Rossiter-McLaughlin Observations G. Hébrard
146 500 Additional Long-Term Follow-Up (RV & Transit Timing) F. Bouchy
160 000 Complementary Science C. Aerts
Stellar Variability Catalogue A. Tkachenko
161 000 Binary and Multiple Stars J. Southworth
162 000 Pulsating Stars C. Aerts
163 000 Magnetic Stars & Rotational Variables C. Neiner
164 000 Stars with Mass Loss L. Mahy
165 000 Young Stellar Objects & Stars with Debris Disks M. Güdel
166 000 Galactic Structure S. Hekker
167 000 Transient Phenomena & Extragalactic Science P. Jonker & S. Nissanke
169 000 Ground-Based Follow-Up E. Poretti
