Wave 1 - 1995.

Wave 2 - 1996.

Depression - mood change contagion

Produced by the Substance Abuse and Mental Health Services Administration.

Centre for Epidemiological Studies Depression Scale

		During the past week:			
		Rarely or none of the time (less than 1 day)	Some or a little of the time (1-2 days)	Occasionally or a moderate amount of time (3-4 days)	Most or all of the time (5-7 days)
1	<i>I was bothered by things that usually don't bother me.</i>	0	1	2	3
2	<i>I did not feel like eating; my appetite was poor.</i>	0	1	2	3
3	<i>I felt that I could not shake off the blues even with help from my family or friends.</i>	0	1	2	3
4	<i>I felt that I was just as good as other people.</i>	3	2	1	0
5	<i>I had trouble keeping my mind on what I was doing.</i>	0	1	2	3

Sample size = 2194

L. S. Radloff, *The ces-d scale: a self-report depression scale for research in the general population*, Appl Psych Meas 1 (3) (1977) 385-401.

Obesity - weight change contagion

Fryar, C. D. et al. (2012). *Prevalence of obesity among children and adolescents: United States, trends 1963–1965 through 2009–2010*. National Center for Health Statistics, 1960–2002.

Body Mass Index

$$\text{BMI} = \frac{\text{weight [lb]}}{(\text{height [in]})^2} \times 703$$

$$X_i = \text{BMI}_i$$

Sample size = 2161

CDC, *Percentile data files with lms values*, (2009), URL http://www.cdc.gov/growthcharts/percentile_data_diles.htm.

Sacher, P. M. et al., *Randomized controlled trial of the MEND program*, (2010) *Obesity*, 18: S62-S68.

Body Mass Index

$$\text{BMI} = \frac{\text{weight [lb]}}{(\text{height [in]})^2} \times 703$$

$$X_i = \text{BMI}_i$$

Sample size = 2161

(1) No threshold $|X_i(t+1) - X_i(t)| > 0$

(2) 0.2 threshold $|X_i(t+1) - X_i(t)| \geq 0.2$

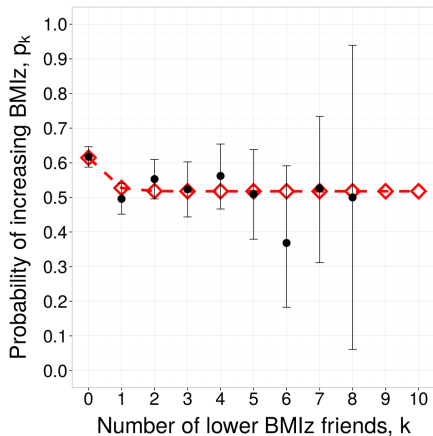

CDC, *Percentile data files with lms values*, (2009), URL http://www.cdc.gov/growthcharts/percentile_data_diles.htm.
