|-----------------------------------------------------|-----------|
| Preface | i |
| 1 Introduction | 1 |
| 1.1 Control Systems | 1 |
| 1.1.1 Classification of Control Systems | 2 |
| 1.2 Laplace Transform | 4 |
| 1.2.1 Properties of Laplace transform | 7 |
| 1.3 Example Problems | 11 |
| 2 Laplace Transfer Function | 13 |
| 2.1 Electrical Elements | 13 |
| 2.1.1 Kirchhoff's Laws | 15 |
| 2.2 Mechanical Elements | 17 |
| 2.3 Example Problems | 23 |
| 3 Test Signals and Dynamic Response | 27 |
| 3.1 Hydraulic Amplifier | 27 |
| 3.2 Test Signal: Unit Step | 29 |
| 3.3 Test Signal: Unit Ramp | 30 |
| 3.4 Hydraulic Servo | 31 |
| 3.4.1 Dynamic response due a unit step | 33 |
| 3.4.2 Dynamic response due to a unit ramp | 34 |
| 3.5 Example Problems | 35 |
| 4 Laplace Poles and Zeros | 37 |
| 4.1 Poles and Zeros | 37 |
| 4.2 Effects of Poles on System Response | 38 |
| 4.2.1 Case of real poles | 39 |
| 4.2.2 Case of complex poles | 40 |
| 4.2.3 Illustrations | 40 |
| 4.2.4 Summary | 43 |
| 4.3 Example Problems | 44 |

| | | |
|----------|---------------------------------------------------------------|-----------|
| 5 | Continuous System Responses | 45 |
| 5.1 | Transient Response and Impulse Response | 45 |
| 5.2 | Stability, Impulse Response and Laplace Poles | 46 |
| 5.2.1 | Case of real poles | 46 |
| 5.2.2 | Case of Complex poles | 48 |
| 5.2.3 | Summary | 49 |
| 5.3 | Frequency Response | 50 |
| 5.3.1 | Relationship between Laplace transform and Fourier transform | 50 |
| 5.3.2 | Geometric evaluation of Fourier transform from pole-zero plot | 50 |
| 5.4 | Example Problems | 55 |
| 6 | Control Systems and System Representation | 57 |
| 6.1 | Generalised Closed-Loop Control System | 57 |
| 6.1.1 | An open-loop control system | 58 |
| 6.1.2 | A closed-loop control system | 60 |
| 6.1.3 | Open-loop versus close-loop | 61 |
| 6.2 | System Representation | 62 |
| 6.2.1 | Comparator | 63 |
| 6.2.2 | Control element | 63 |
| 6.2.3 | Unity-feedback control system | 64 |
| 6.2.4 | Feedback control system | 64 |
| 6.3 | Example Problems | 65 |
| 7 | Second-Order Control Systems | 67 |
| 7.1 | Undamped Natural Frequency and Damping Factor | 67 |
| 7.1.1 | A radio telescope positioning system | 69 |
| 7.2 | Step Response of a Second-Order System | 71 |
| 7.3 | Frequency Response of a Second-Order System | 73 |
| 7.4 | Example problems | 75 |
| 8 | Routh-Hurwitz Stability Criterion | 79 |
| 8.1 | Routh-Hurwitz Array and Stability Criterion | 80 |
| 8.2 | Cases of Ruth-Hurwitz Array | 81 |
| 8.3 | Example Problems | 85 |
| 9 | System Specifications | 87 |
| 9.1 | Steady-State Response | 87 |
| 9.2 | Error Constants and Steady-State Response | 88 |
| 9.3 | Control System Specifications | 94 |
| 9.4 | Example Problem | 96 |

| | | |
|-----------|------------------------------------------------------------------|------------|
| 10 | Types of Controllers | 99 |
| 10.1 | Proportional Controller | 100 |
| 10.2 | Derivative Controller | 100 |
| 10.3 | Integral Controller | 102 |
| 10.4 | Summary | 103 |
| 10.5 | Proportional, Integral and Derivative (PID) Controller | 103 |
| 10.6 | An Electronic PID Controller | 105 |
| 10.7 | Example Problems | 107 |
| 11 | Discrete System Models | 111 |
| 11.1 | Sampling, Quantisation and Data Interpolation | 112 |
| 11.1.1 | Sampling (in ADC) | 112 |
| 11.1.2 | Quantisation (in ADC) | 114 |
| 11.1.3 | Data interpolation | 114 |
| 11.2 | Sampler | 115 |
| 11.3 | Sample-and-Hold Element | 118 |
| 11.3.1 | Zero-order hold | 118 |
| 11.4 | Example Problems | 120 |
| 12 | Z Transform and Transfer Function | 123 |
| 12.1 | Properties of Z Transform | 125 |
| 12.2 | Z-Transform Transfer Function | 128 |
| 12.2.1 | Pulse transfer function | 128 |
| 12.3 | Linear Shift Invariant (LSI) Operations on Sequences | 129 |
| 12.3.1 | Multiplier | 129 |
| 12.3.2 | Adder | 129 |
| 12.3.3 | Delay unit | 130 |
| 12.3.4 | A moving averager | 130 |
| 12.4 | Example Problems | 132 |
| 13 | Digital Filters | 133 |
| 13.1 | Finite Impulse Response (Non-Recursive) Filters | 133 |
| 13.2 | Direct Implementation | 134 |
| 13.2.1 | Zeros | 136 |
| 13.3 | Infinite Impulse Response (Recursive) filters | 137 |
| 13.3.1 | Direct implementation | 138 |
| 13.4 | Example Problems | 139 |
| 14 | Recursive Digital Filters | 141 |
| 14.1 | Poles and Zeros | 141 |
| 14.2 | Stability | 142 |

| | | |
|-----------|--------------------------------------------------------------------------|------------|
| 14.3 | Relationship Between Z Transform and Discrete Fourier Transform | 143 |
| 14.4 | Poles, Zeros and Frequency Response | 144 |
| 14.5 | Example Problems | 148 |
| 15 | Filter Types | 149 |
| 15.1 | Lowpass Filter | 149 |
| 15.2 | Highpass Filter | 152 |
| 15.3 | Bandpass Filter | 154 |
| 15.4 | Bandstop Filter | 155 |
| 15.5 | Second-Order IIR Filter | 157 |
| 15.6 | Example Problems | 158 |
| 16 | Filter Implementation, Difference Equation and Modelling | 161 |
| 16.1 | Implementing a Second-Order Digital Filter | 161 |
| 16.1.1 | Obtaining a frequency response with a specified gain | 162 |
| 16.2 | Difference Equation | 163 |
| 16.2.1 | Discrete differentiation | 163 |
| 16.2.2 | First-order system | 165 |
| 16.2.3 | Second-order system | 167 |
| 16.3 | Example Problems | 168 |
| 17 | Sampled Data Systems | 171 |
| 17.1 | Converting a Continuous System to a Sampled Data System | 172 |
| 17.2 | Closed-Loop Transfer Function | 175 |
| 17.3 | Example Problems | 177 |
| 18 | Digital Control Systems | 181 |
| 18.1 | Effects of Sampling Rate | 181 |
| 18.2 | Simulating System Response | 182 |
| 18.3 | Digital Closed-Loop Control System | 184 |
| 18.4 | Digital Proportional, Integral and Derivative (PID) Controller | 184 |
| 18.5 | Example Problems | 187 |
| 19 | Discrete System Responses | 189 |
| 19.1 | Alternative Discrete Integration and Differentiation | 189 |
| 19.2 | Frequency Response | 190 |
| 19.3 | Effects of Sampling Rate on Discrete Frequency Response | 193 |
| 19.4 | Steady-State Response of Discrete Systems | 196 |
| 19.5 | Example Problems | 197 |
