

Combinatorics Seminar

Friday February 22, 2013 at 2PM

Room B1.01

Vadim Lozin

(University of Warwick)

Ramsey Theory and Parameterized Complexity

Parameterized complexity is a recent branch of computational complexity theory that provides a framework for a refined analysis of hard algorithmic problems. Ramsey theory is a branch of mathematics that studies the conditions under which order must appear. In this talk, we will reveal various connections between the two fields.

**There will be refreshments for the attendees.
Please bring your own mugs (for coffee/tea) if possible.
Everyone is welcome.**
