

Implementation of decarbonisation actions in General Practice to help achieve a net zero NHS. A mixed methods study of institutional, organisational, professional, and patient factors (GPNET-0 Study)

OUR METHODS:

SURVEY

- ✔ Recruit **500** practices spanning 3 ICBs: **Birmingham and Solihull**; **Coventry and Warwickshire**; and **South Yorkshire**.

- ✔ Staff within any role to respond.
- ✔ Survey will take no longer than **5 minutes** to complete, and for each practice returned survey, a tree shall be planted through **NHS Forest**.
- ✔ Practices can express interest in becoming a case study.

WE NEED YOUR HELP!

Are you working in a practice in Coventry and Warwickshire ICB, Birmingham and Solihull ICB, or South Yorkshire ICB? If so, we'd love to hear from you, no matter the current level of engagement with decarbonisation activities.

LONGITUDINAL CASE STUDIES

- ✔ **12 practices** will be followed for >9 months. Data will be collected on how they plan and implement decarbonisation actions, challenges and barriers, and how these are overcome.
- ✔ We will host a workshop, use interviews, focus groups, and the non-clinical carbon calculator to collect data. Practices will be offered **£2500** as commitment to participation.
- ✔ To understand **patients' views**, we will invite 35 at each participating practice to complete a survey, and some will be selected for further interview.
