

# Mindreading & Joint Action

## 8. Shared Intention & Motor Representation in Joint Action

butterfills@ceu.hu

## Outline

1. The leading philosophical approach to shared agency

2. Limits of this approach

---

3. (Building blocks for) an alternative approach

4. Motor representation

---

5. The emergence of mindreading

# conjecture

The prior existence of capacities for shared agency partially explains how sophisticated forms of mindreading emerge in evolution or development (or both)

1. All shared agency involves shared intention.

2. Shared intention requires sophisticated mindreading.

Therefore:

3. The prior existence of capacities for shared agency ~~partially explains~~ cannot explain how sophisticated forms of mindreading emerge in evolution or development (or both)

conjecture

1. All shared agency involves shared intention.

2. Shared intention requires sophisticated mindreading.

Therefore:

3. The prior existence of capacities for shared agency ~~partially explains~~ cannot explain how sophisticated forms of mindreading emerge in evolution or development (or both)

shared agency without shared intention

What is the relation between a purposive <sup>joint</sup> action and the goal or goals to which it is directed?

What is the relation between a purposive <sup>joint</sup> action and the goal or goals to which it is directed?

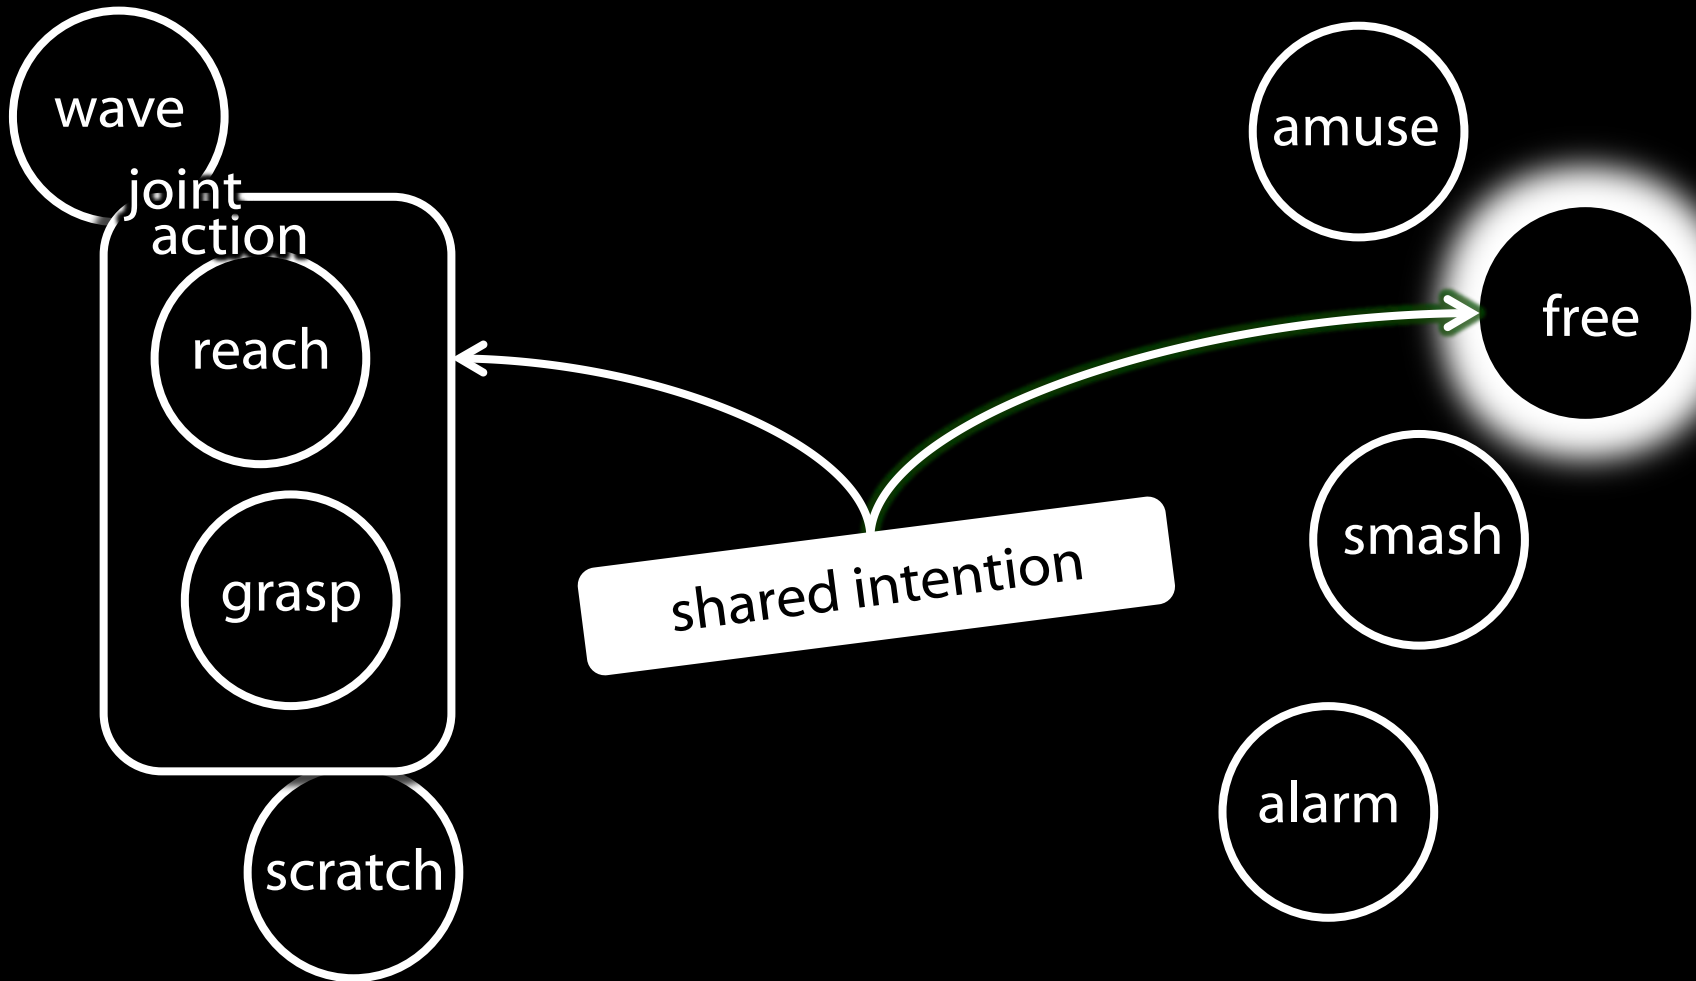

What is the relation between a purposive <sup>joint</sup> action and the goal or goals to which it is directed?

G is a distributive goal: it is an outcome to which each agent's actions are individually directed and it is possible that: all actions succeed relative to this outcome.

## Shared Agency

## Merely Parallel Individual Agency

G is a distributive goal: it is an outcome to which each agent's actions are individually directed and it is possible that: all actions succeed relative to this outcome.

Members of a flash mob  
simultaneously open  
their newspapers noisily

Two friends walk to the  
metro station together.

Onlookers  
simultaneously open  
their newspapers noisily  
(cf. Searle 1990: 92)

Two strangers walk the  
same route side-by-side.  
(Gilbert 1990)

G is a distributive goal: it is an outcome to which each agent's actions are individually directed and it is possible that: all actions succeed relative to this outcome.

G is a distributive goal: it is an outcome to which each agent's actions are individually directed and it is possible that: all actions succeed relative to this outcome.

G is a distributive goal: it is an outcome to which each agent's actions are individually directed and it is possible that: all actions succeed relative to this outcome.

Nora's  
Two friends walk to the metro station together.

Nora and Olive, deadly enemies, kill Fred.

Two strangers walk the same route side-by-side.  
(Gilbert 1990)

Two friends collaboratively kill Fred.

G is a distributive goal: it is an outcome to which each agent's actions are individually directed and it is possible that: all actions succeed relative to this outcome.

G is a collective goal

- (a) it is a distributive goal;
- (b) the actions are coordinated; and
- (c) coordination of this type would normally facilitate occurrences of outcomes of this type.

# The Interface Problem

# The Interface Problem

Some joint actions involve  
both shared intention and  
shared motor representation

# The Interface Problem

Shared motor  
representations:

i. represent outcomes;

ii. ground the  
purposiveness of some  
joint actions

Some joint actions involve  
both shared intention and  
shared motor representation

## The Interface Problem

Shared motor representations:

- i. represent outcomes;
- ii. ground the purposiveness of some joint actions

Two outcomes, A and B, *match* in a particular context just if, in that context, either the occurrence of A would normally constitute or cause, at least partially, the occurrence of B or vice versa.

Some joint actions involve both shared intention and shared motor representation

## The Interface Problem:

How are non-accidental matches possible?

Shared motor representations:

- i. represent outcomes;
- ii. ground the purposiveness of some joint actions

Two outcomes, A and B, *match* in a particular context just if, in that context, either the occurrence of A would normally constitute or cause, at least partially, the occurrence of B or vice versa.

Some joint actions involve both shared intention and shared motor representation

## The Interface Problem: How are non-accidental matches possible?

Shared motor representations:

i. represent outcomes;

ii. ground the purposiveness of some joint actions; and

iii. differ in format from (the constituent attitudes of) shared intentions.

Two outcomes, A and B, *match* in a particular context just if, in that context, either the occurrence of A would normally constitute or cause, at least partially, the occurrence of B or vice versa.

Some joint actions involve both shared intention and shared motor representation

## Joint jumping imagery

- Task: “Imagine to jump while landing at the same time as another person on the other side of the occluder!”
- Measurement: Self-reported duration of imagined jump

# Imagery

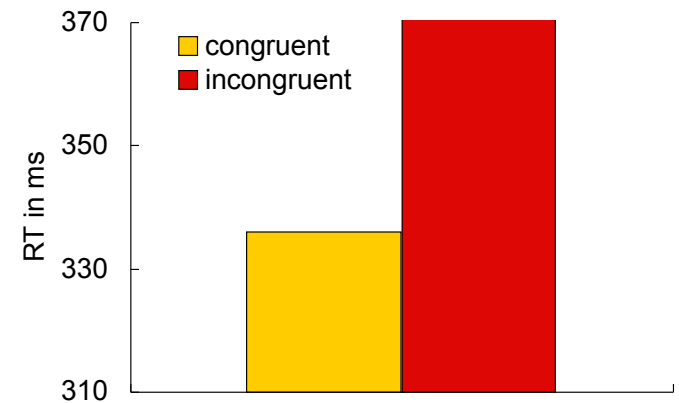

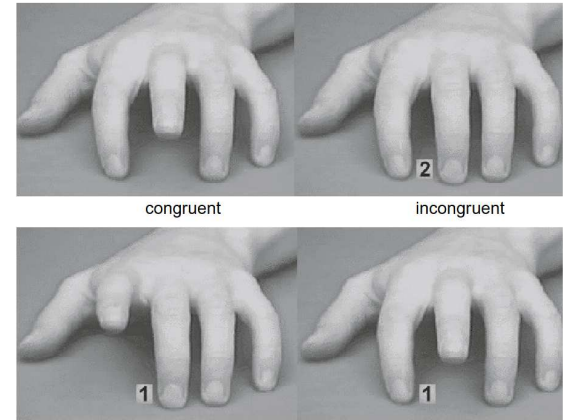

**In some joint actions, the agents have a single  
representation of the whole outcome  
(slides from Natalie Sebanz)**

# Group-level action planning?

Experimental paradigm is based on the phenomenon of ‘perception-action matching’: Observing an action creates a tendency to perform this action. That is, individual action plans are activated based on the observation of individual actions.

As a consequence, performing an action that is similar to the observed action is easy while performing an action that is opposite to the observed action is more difficult (e.g., Brass et al., 2001).

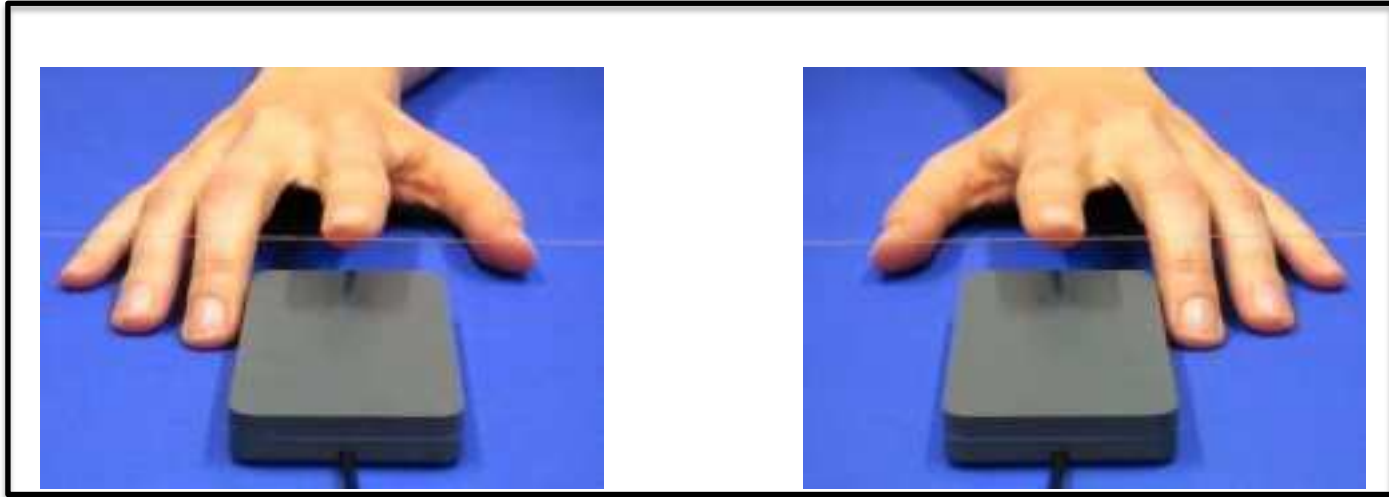

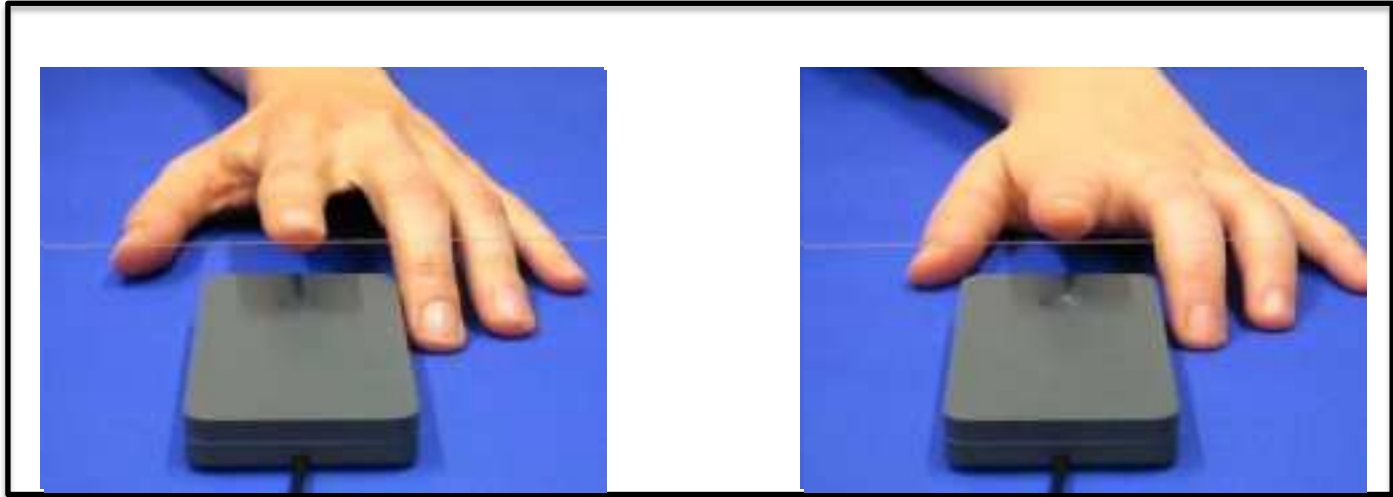

# Group-level action planning?

If co-actors form group-level action plans, then observing joint action should create a tendency to perform joint actions (perception-action matching at an inter-group level).

It should be more difficult to perform joint actions when observing individual actions.

Participant's task is to press a key when the right hand is moving.

Congruent condition: Confederate moves when left hand is moving and when both hands are moving.

C

P

## Evidence for...

Perception-action matching at an inter-group level.

Observing actions being performed simultaneously by two agents activates a corresponding action plan. This action plan specifies an agent's own action in relation to their co-actor's action (possibly in terms of perceptual events). Performing an individual action in response to an observed joint action is difficult, because the joint action plan activated through joint action observation needs to be replaced by an individual action plan.

## Sufficient conditions

We have a shared intention that we J if

“1. (a) I intend that we J and  
(b) you intend that we J

“2. I intend that we J in accordance with and because of Ia, Ib, and meshing subplans of Ia and Ib; you intend [likewise] ...

“3. 1 and 2 are common knowledge between us”

(Bratman 1993:View 4)
